Scenario:

You are trying to upload every document that your college requires you to upload.

Task 1: Log in using your college id and password

Task 2: Press the upload button on the calendar

Task 3: Drag your document to the upload box or press upload then click the file you want to upload (Note: I'd have to extend my prototype to do this)

Task 4: Press submit

Notes
What changes you should make to your application:
- I need a back button to go back to the calendar just in case you press on the wrong document
- I need to put an upload button that will pull up the computer's files so the user can click the file instead of dragging the file over
- I need to make a way to go back to the calendar after the user presses submit

What you need to keep the same for your application:
- Keep the calendar
- Keep the login
- Keep the upload button on the calendar
